

## Frequently Asked Questions

### What types of shares does Braskem withhold?

There are two types of shares in the Brazilian market: Common and Preferred.

Common shares are those that confer shareholders the right to participate in a company's earnings and the right to vote at shareholders' meetings.

Preferred shares are characterized for having priority upon the distribution of dividends and, in the event the company is dissolved, they have priority in receiving the distribution of its capital. Preferred shares do not confer the right of vote in shareholders' meetings, except in special situations. In general, a larger percentage is set aside for preferred shares than for common shares for the purpose of the distribution of dividends. Braskem preferred shares are divided into two different classes: Class A (PNA) and Class B (PNB).

Regarding form, shares are nominative or book entry

Braskem chose the book entry form for its shares since the system offers greater safety and convenience for shareholders.
